

THE BRITISH  
NAVY  
IN  
THE  
WORLD

First Things First.

In April 1933, the first of the new British Navy Estimates was published. It was a document of some 1,000 pages, and it was the first of a series of documents which were to be published annually. The first of these documents was the 'White Paper on the Navy', which was published in April 1933. It was a document of some 1,000 pages, and it was the first of a series of documents which were to be published annually.

CL. J. J. J.  
(1933)

It is symptomatic alike of the nation's diplomatic timidity and the Section's functional sterility that, as the detailed records reveal:

1. Some of the Section's most vital projects have been vetoed almost at birth for political reasons.
2. Some of the Section's most valuable accomplishments have been won in the sphere of sabotage and propaganda.

#### Relations with the U.S.A.

The Section was conceived as an integral though distinct branch of the F.I.R. and as it has evolved, to the U.S.A. this Section is indebted for patient guidance and for co-operation. In the work, the Section, incidentally to its main purposes, has been able to maintain a regular flow of valuable information derived from four main sources:

1. From the constant expenditures of Section Officers or Agents into all the countries of Europe.
2. From the intimate relations which the Section has established with virtually every anti-Nazi and anti-Fascist organization in Europe.
3. From the Section's contacts, direct or indirect, with the sabotage and propaganda organizations actually resident in many of anti-Fascist countries.

#### Main Organization.

The departments of this Section, loosely defined and of interchangeable personnel, fall into four natural groups:

1. Administration.
2. Plans.
3. Supplies.
4. Execution.

No time need be wasted on Administration. Planning has brought the Section into a daily contact with all the Service Departments and many of the State Departments, particularly the Foreign Office and the Ministry of Economic Warfare. From the Ministry the Section has received numerous

THIS IS A COPY  
ORIGINAL DOCUMENT RETAINED  
IN DEPARTMENT OF THE PUBLIC RECORDS  
ACT 1958

and -unpublished- documents. The Section only works on order to obtain this necessary work on the administrative system of industry.

In the field of communications, again, progress has been made.

1. Look after the internal requirements of the Section. Officers and Agents. Requirements which range from a chartered accountant for an American millionaire to a sailing ship for a Maltese fisherman. The movement of a lot of confidential agents across a crowded Continent must at least be discreet. That people are working with complete independence of movement, of discipline, of strategy, of secret and of secrecy. That indeed from across the immigration, and it is proper to have that in little more than a year, the Section's Officers, Computers and Agents, have travelled over 1,000,000 miles. Now with the difficulty and danger of maintaining this level of work. Some of the Section's activities, secondary activities, some or proceeds have been found to reach their destination.

2. In the field of communications, there is isolated information and some few areas of compilation. For the Section is working in the area of intelligence or special communication, since the facilities of the R.T.S. have been put at the Section's disposal.

The work of the Telecommunications Department of the Section has therefore been almost exclusively restricted to the work of the Section. The Officer, in little more than a year, has three very considerable inventions to his credit - one of them probably a most startling advance in technology. These are:-

(a) The "D-Form". A telephone which leaves a "message" for the caller and records the message in a way which the telephone system can read. The "D-Form" may also be used to record the message.

(b) The "Signal Transmitter". A wireless telephone using a wave band which is placed on by one wire and received by another. This invention has been designed for communication between agents operating in foreign countries. Its range is strictly limited.

(c) A high-speed recorder, in use for the first time, which has been used to record a message from a radio set. It is used by the Office of the Section. At present level even, this machine has a range of intelligible speech of 10 miles.

Lastly in the field of personnel:

1. A school has been opened and is now working as a secret place to supply the executive departments of the Section with trained agents and trained professionals. Some from the staffs of all kinds of services in which the Section operates.
2. Other departments, more particularly that which is concerned with the Section's relations with the public. This is a very important section in which the Section is working.

able to find and identify reliable foreign sources.

And finally, cooperation has always been essential in the development of the intelligence service. It is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned. It is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned.

The detailed information under this heading covers the entire field of intelligence, and is divided into two main sections. The first section covers the entire field of intelligence, and the second section covers the entire field of intelligence.

Unless the entire intelligence service is able to obtain information from all sources, it is impossible for it to be able to disseminate this information to all concerned. It is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned. It is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned.

#### GENERAL PRINCIPLES. (see page 2).

Before making a more detailed analysis of the intelligence service, it is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned. It is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned. It is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned.

#### DISCUSSION

1. In the first place, it is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned. It is essential that the intelligence service be able to obtain information from all sources, and that it be able to disseminate this information to all concerned.

6. RESEARCH  
Another officer of this Section also left England, and under the name of Guyton Lawrence, obtained \$25,000,000 in gold bars in the last French exchange to leave the quay at Dunkirk.

7. RESEARCH  
Early in 1920 Colonel Brown initiated the organization and development of guerrilla warfare. This began as a subdivision of this Section has since been established as a branch of the War Department.

8. ANTI-AMERICANISM  
The Section's exchange section supply Division produced a paper of instructions for propaganda against America. This was accepted by U.S. A and has been circulated in all parts of the Empire.

Another paper by the same Division on propaganda against America to shipping has been published officially by the Admiralty.

9. THE COMBAT UNIT  
An Officer of the Section after extensive research, both here and in other countries, compiled a Compendium exposure of the pro-Nazi influence of Dr. Goebbels's religious movement throughout the world.

10. THE COMBAT UNIT  
The Division in touch with the German college political organization in Great Britain has produced a complete 1,000 page photographic copy of a German Government official and secret index giving the names, addresses and telephone numbers of virtually the whole Nazi hierarchy between Germany.

11. RESEARCH  
In the course of the routine and gifts of area and machine guns and explosives into Norway, an Officer of the Section has been able to provide detailed contemporary knowledge of the targets, some of which, e.g. Bergen Airfield, have been used in great effect.

12. RESEARCH  
Before the war, Colonel Grand conceived and put in being the "Joint Broadcasting Committee" now in part controlled by the Ministry of Information.

13. RESEARCH  
As already recorded under this same sub-division of supply department, an Officer of this Section has invented the "D-Phone", the "Duplex Transceiver" and a high-powered teleprinter.

IN DEPARTMENT UNDER SECTION  
5 (b) OF THE RECORDS  
ACT 1958.

11.

### WINDY DISSENT.

At war most forlorn seemed when our army was pouring back from Dunkirk through gates we could never have shut against the invading enemy. Indeed, indeed concealed the plan of organizing throughout Great Britain a closely co-ordinated sabotage and intelligence network among the civilian population who would be left behind in any territories which the German invaders might temporarily be able to occupy.

Some 20 Officers of this Section went to work at high pressure and completed this organization and distributed in several thousand secret dumps throughout the country a vast quantity of incendiary materials. This organization has now been taken over by the newly constituted branch of the War Office, the Auxiliary Units.

12.

### GENERAL DE GAULLE.

The only officer who has so far lost his life in the service of this Section was when leading an expedition by air in an attempt to rescue from German occupied territory in France the family of General de Gaulle.

## RESULTS.

### Positive operations.

#### 1. Politics.

Appendix 1. shows the political organizations both in Great Britain and abroad with whom the Section has maintained working relations. These are also shown on Map 1.

The Section's objectives are of two kinds:-

#### (1) Immediate.

- (a) Development of communications into the country represented.
- (b) Information about events in that country.
- (c) Implementation of the Section's propaganda programme.
- (d) Co-operation in the Section's sabotage projects.
- (e) Supply of personnel.

#### (2) Ultimate.

- (a) Co-ordination of each organization with all others in a common purpose, and the elimination of doubts in favour of faith in and hope for a united future.
- (b) The possible discovery of potential political leaders to inspire and direct revolt when revolt is ripe and not before- and to take control when their time for government has come.

The divisions of the Section most active in this work have been, of course, those two which are concerned with the Austrian exile organizations and the German exile organizations.

It might be obvious that at this stage of the war it is impossible to assess the value, leave alone the results of the Section's work in this field, but few avenues remain unexplored, few stones unturned.

The fields have been ploughed and the seed has been sown, but before it could germinate and take root, the earth was trampled underneath. The seeds of the Section's sowing it may one day reap, only time can show.

2. Propaganda.

The printed propaganda work of the Section, it must always be remembered, differs from that of the Ministry of Information and other organizations, in that it is all designed, printed and distributed in such a way as to conceal completely and successfully its British origin. Instead, it is made to appear as having originated either in the country to which it is directed or in some contiguous country.

Appendix 2, summarizes the printed propaganda distribution results of this Section up to date, and the figures reflect not only the difficulties imposed by the absolute necessity for secrecy, but also the fact that during the last four months communications in to and out of the continent of Europe have, if only temporarily, been almost completely suspended. The distribution of this propaganda involves the Section in the forging of foreign stamps and the risking of many men's lives. But because this ostensibly indigenous propaganda is infinitely more effective because more credible, than leaflets which drop bravely from British aeroplanes in the sky - and because in many countries ruled by terror such leaflets are treasured, passed from hand to hand and so on, and so enjoy an attention and a circulation undreamt of in free democracies - for these very good reasons, the Section persists in this difficult and dangerous work.

The distribution of the Section's efforts geographically is indicated on Map 1, where also are indicated any results of the Section's propaganda which it has been possible to credit.

3. Radio.

Appendix 3, lists three acts of successful sabotage

1. The first part of the paper is devoted to a general discussion of the problem of the existence of solutions of the system of equations (1) under the conditions (2). It is shown that the system (1) has a solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

2. In the second part of the paper, the problem of the uniqueness of the solution of the system (1) is considered. It is shown that the system (1) has a unique solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

3. In the third part of the paper, the problem of the stability of the solution of the system (1) is considered. It is shown that the system (1) has a stable solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

4. In the fourth part of the paper, the problem of the asymptotic stability of the solution of the system (1) is considered. It is shown that the system (1) has an asymptotically stable solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

5. In the fifth part of the paper, the problem of the boundedness of the solution of the system (1) is considered. It is shown that the system (1) has a bounded solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

6. In the sixth part of the paper, the problem of the periodicity of the solution of the system (1) is considered. It is shown that the system (1) has a periodic solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

7. In the seventh part of the paper, the problem of the ergodicity of the solution of the system (1) is considered. It is shown that the system (1) has an ergodic solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

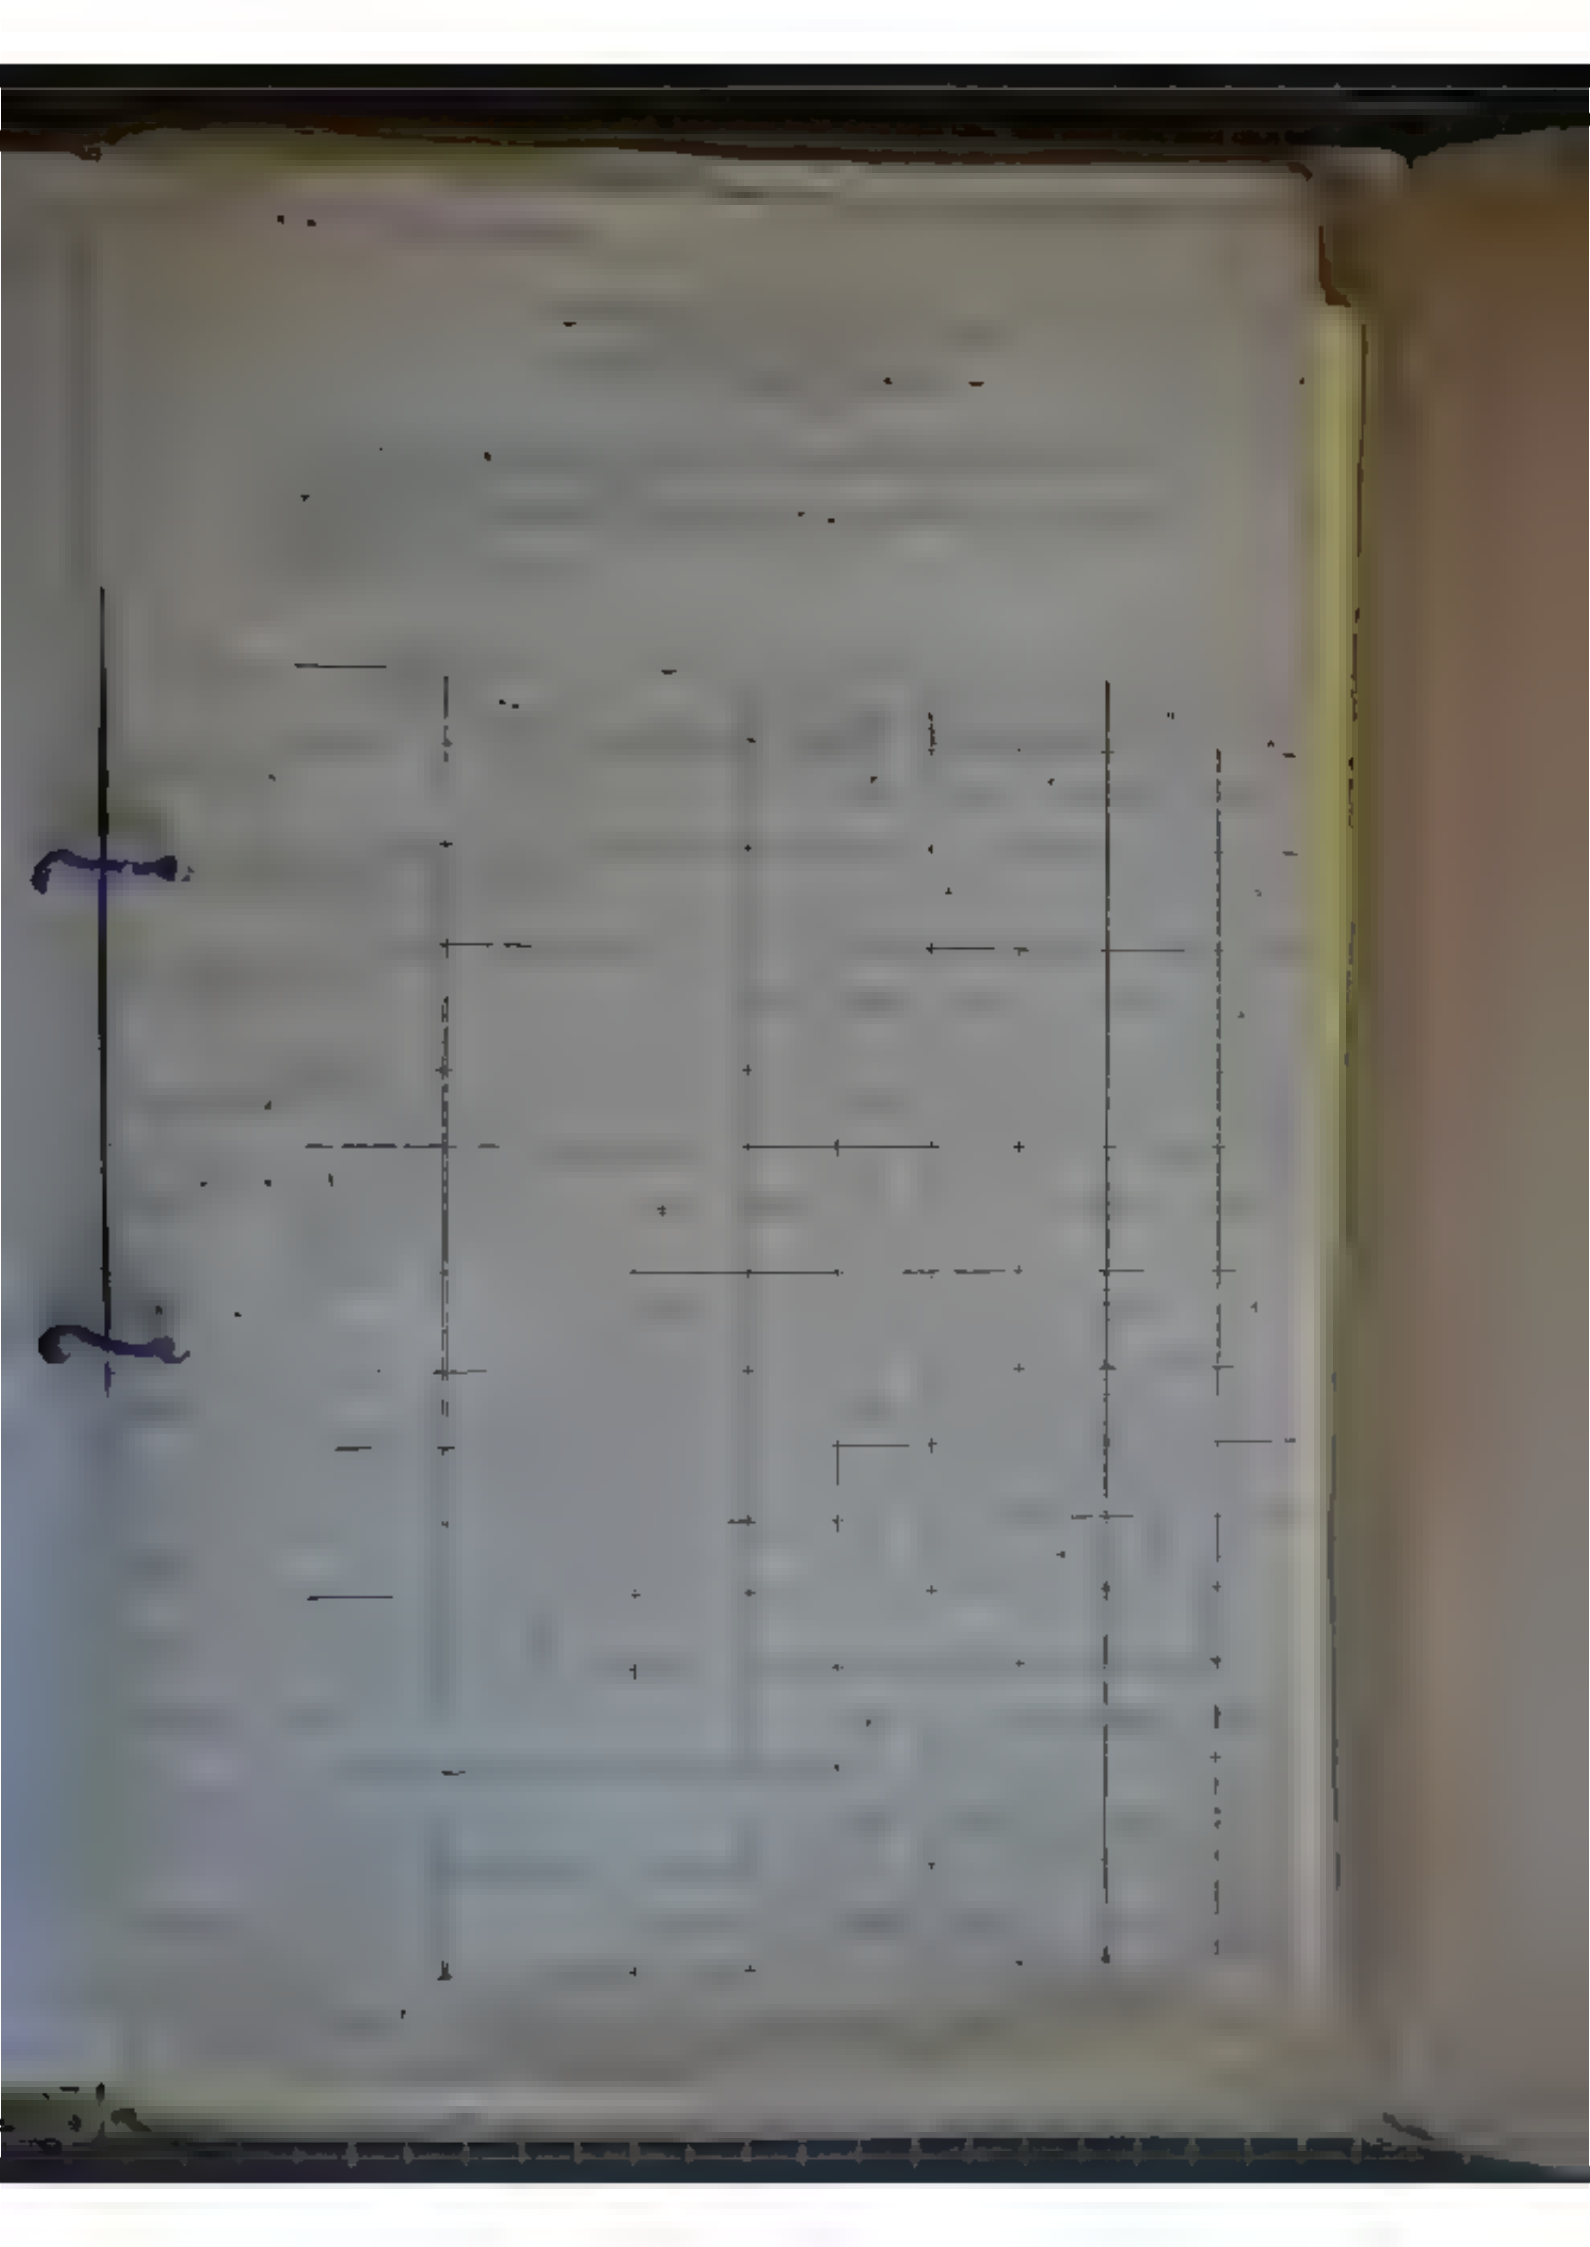

8. In the eighth part of the paper, the problem of the mixing of the solution of the system (1) is considered. It is shown that the system (1) has a mixing solution if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

9. In the ninth part of the paper, the problem of the entropy of the solution of the system (1) is considered. It is shown that the system (1) has a solution with finite entropy if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

10. In the tenth part of the paper, the problem of the information of the solution of the system (1) is considered. It is shown that the system (1) has a solution with finite information if and only if the conditions (2) are satisfied. The proof is given in the form of a theorem.

area, though whether it will be big enough to be described as a rebellious capital.

### III. SPAIN.

Although Spain has been omitted from the questionnaire it should be noted that a party, the Alliance Democratic Republic, exists under our control. Its membership stretches all over Spain and which, given a reasonable chance of success, is, according to that it can be protected from armed invasion by Italy and that the German troops attention is taken up, is prepared and organized to sabotage communications, aerodromes, petrol supplies, railways, etc. In fact, it would, with little doubt, be able to spend Franco and replace a government on the slogan of "Spain for the Spaniards".

The shortage of food in Spain is already serious and there is little doubt that by next March this shortage will be acute. Here again the possibility of achieving any great success must depend on the famine conditions which will have obtained by that date.

We must also observe that the maximum support is forthcoming from neutral countries. There must not only be the flow of armaments bought and paid for from the U.S.A., but also the flow of people willing to return to Europe with the aim of converting their home countries. There must be propaganda to and through the minorities in North and South America, which will tend to deprive opinion in the European countries of origin. There must be propaganda in the Islamic world, which will lead to anti-axis action in Africa and the checking of Germany's eastward movement in general.

SUMMARY OF ACTUALS THROUGH JANUARY 1964

	BASE COSTS	AVAILABILITY COSTS	PROPOSED EXTENTS	EXACTS	STOCK BASE	STOCKS	STOCKS	A.I.S.	TOTAL
